

Disable 'save activity' prompts in Agent Browser (non admin user)

Non-administrative Windows users are unable to access the Datto/CentraStage Agent Browser preferences menu to disable the **save activity** / **notes** prompt shown after closing a client session.

The prompt can still be disabled by editing the user-specific Agent Browser configuration file and changing the `RequireNotes` setting from `True` to `False`.

The Agent Browser preference is stored in the user's local profile configuration file:

```
%LOCALAPPDATA%\CentraStage\Gui.exe_Url_*\*\user.config
```

The relevant setting is:

```
<setting name="RequireNotes" serializeAs="String">
  <value>True</value>
</setting>
```

Change the `RequireNotes` value to `False`. Save the file, then exit the agent browser by right clicking on the icon in the system tray. When the agent browser is reopened, it should no longer prompt for saving activity upon ending a session.
